## Summary

---

Computer Engineering undergraduate with practical experience in MERN stack development through academic and internship projects. Worked on React-based frontend development and backend implementation using Node.js, Express, and MongoDB.

## Skills

---

**Languages:** Java, JavaScript, Python

**Frontend:** HTML, CSS, React.js

**Backend & Database:** Node.js, Express.js, MongoDB, MySQL

**Stack & Tools:** MERN Stack, REST APIs, Git

## Education

---

### Bachelor of Engineering in Computer Engineering

Watumull Institute of Engineering and Technology

Aug 2021 – May 2025

### Diploma in Information Technology

VPM's Polytechnic

Aug 2018 – May 2021

## Projects

---

### NFT Marketplace

*Technologies: Solidity, React.js, Web3.js, MetaMask*

- Developed a decentralized NFT marketplace for minting, listing, buying, and selling NFTs using ERC-721.
- Built React.js frontend and integrated MetaMask authentication using Web3.js.
- Connected frontend actions with smart contract functions to handle NFT transactions.

### Hospital Management System

*Technologies: HTML, CSS, JavaScript, Node.js, Express.js, MongoDB, MySQL*

- Developed a web-based system to manage patient records, appointments, billing, and staff data.
- Implemented backend APIs using Node.js and Express.js for CRUD operations.
- Designed and tested REST APIs with MongoDB/MySQL for data storage.

### Music Genre Classification

*Technologies: Python, Scikit-learn, Librosa, Pandas, Matplotlib*

- Built and compared ML models including Random Forest, KNN, and SVM for genre classification.
- Achieved approximately 85% accuracy through feature extraction and evaluation.

## Experience

---

### Web Developer & Project Coordinator (Intern)

Sahu Technologies

Jan 2022 – Mar 2022

- Developed frontend components using HTML, CSS, JavaScript, and React.js.
- Coordinated tasks and tracked progress for a team of college interns.
- Assisted in project planning, debugging, and implementation improvements.
